

Reading Horizons Elevate® (Options Schools Grades 9–12 LTEL Courses)

The *Reading Horizons Elevate*® reading program helps English Learning Students (ELs) understand the patterns and structure of the English language through a clear, research-based [reading curriculum](#). The program empowers teachers with the materials to prepare and deliver research-based direct instruction lessons to English Learners with the *Reading Horizons Elevate*® Comprehensive Teacher’s Kit. Students receive individualized reading instruction that targets the gaps in their reading skills through the *Reading Horizons Elevate*® Software. Because the software is individualized, it helps students make quick gains.

Teachers can closely measure and monitor student progress, students stay on track for reading success. The *Reading Horizons Elevate*® Software uses a series of assessments to track progress for individual student instruction. Assessment and lesson performance data can be reviewed by teachers and administrators through the administration system. Click [here](#) for more information.

You and your students can access the software through your Clever portal or you can add the badge to your [Schoology](#) page.

If you are new to *Reading Horizons Elevate*® there are a few important points to be aware of:

- The students start with a [Diagnostic Assessment](#) to determine where they may have gaps in foundational skills. The software will then [adjust](#) the amount of instruction given for each lesson. A Reading Assessment is also given to determine reading level.
- You may choose to expedite Chapter 1 instruction for your students. This [document](#) explains how to [expedite](#) the direct instruction. You can expedite Chapter 1 software instruction by clicking the “Expedited” button in the “Lesson Overrides” section of student settings.
- You can find the [scope and sequence](#) and other resources on the Reading Horizons LAUSD support [page](#).

Information for your students:

- The initial assessments are meant to be challenging, so it is okay if students do not know the answers. This is how the software will differentiate instruction for them.
- We recommend using the software on the Google Chrome browser.
- If the software is used on a mobile device, the free [SwiftKey](#) app will need to be installed.

Please contact your Reading Horizons LAUSD Support team at 833-675-1146 or lausd-support@readinghorizons.com

For LA Unified support please contact your district leaders.
